CACI International Valuation & Defense Technology Intelligence Report

DCF valuation, peer benchmarking, factor exposure modeling, defense contractor stress testing, Monte Carlo simulation, GARCH/EWMA VaR risk modeling, defense macro analysis, government spending signals, news intelligence, and expected return modeling

Jason Keen | keenjasonr@gmail.com

Executive Summary

The model combines market data, risk metrics, peer benchmarking, DCF scenarios, defense contractor stress testing, Monte Carlo simulation, company guidance, backlog indicators, defense risk scoring, government spending signals, defense macro analysis, news intelligence, forecasting, expected return modeling, factor exposure modeling, GARCH/EWMA VaR risk modeling, and change detection.

• CACI benefits from long-duration national security, intelligence, cyber, and federal technology demand.

• The company has a differentiated defense technology profile relative to traditional government IT services firms.

• Backlog, contract awards, acquisitions, technology mix, and mission-critical programs are important valuation drivers.

• Management's FY2026 guidance and three-year framework support a valuation model centered on high-single-digit revenue growth, disciplined margins, and free cash flow expansion.

• U.S. defense spending, public intelligence budget toplines, cyber demand, and great-power competition support the broader demand backdrop.

• The main risks are federal budget timing, contract recompete pressure, margin execution, customer concentration, acquisition integration, and valuation multiple compression.

How to Read This Report

This section explains how to interpret the report outputs. The model is designed to move from raw inputs to structured scorecards, valuation outputs, factor exposure analysis, risk adjustments, downside-risk estimates, and a final signal.

Output Type	How to Read It	Example Use
Fair Value Per Share	Estimated equity value per diluted share from the DCF model. Compare this value with th...	Base fair value above current price suggests potential undervaluation, subject to assum...
Signal	Plain-English model interpretation such as Positive, Constructive, Neutral / Monitor, C...	Use the signal to quickly understand whether the data point supports or weakens the inv...
Score	Most scorecards use a 0 to 100 scale. Higher scores generally indicate stronger support...	A score above 70 usually indicates supportive conditions; below 60 usually requires mon...
Weight	The relative importance assigned to each scorecard component. Weights are used to calcu...	A high-weight component has more influence on the final score than a low-weight component.
Weighted Contribution	Component score multiplied by its weight. These contributions roll up into the overall ...	Shows which components are driving the final intelligence score.
Factor Beta / Sensitivity	Estimated sensitivity of CACI daily returns to market, defense, technology, rate, and v...	A high defense factor beta suggests CACI behaves more like a defense-sector equity; neg...
Factor Model R-Squared	Share of CACI daily return variation explained by the selected factor model.	A higher R-squared indicates that market, defense, technology, rate, and volatility fac...
VaR / Expected Shortfall	One-day loss estimates from historical, parametric, and GARCH/EWMA volatility methods. ...	Use VaR and expected shortfall to understand downside risk separate from valuation upside.
DCF Sensitivity	Shows how fair value changes as WACC and terminal growth assumptions change.	Higher WACC lowers fair value; higher terminal growth usually raises fair value.

Output Type	How to Read It	Example Use
Stress Test	Shows how fair value changes under downside scenarios such as budget delays, continuing...	Use the stress-test downside table to identify which risk case creates the largest valu...
Monte Carlo Percentiles	Percentile outcomes from thousands of simulated valuation runs. P10 is downside, median...	A median fair value above current price suggests favorable simulated valuation support.
Expected Return	Estimated upside or downside after blending DCF scenarios and applying selected risk or...	Risk-adjusted expected return is the final return estimate after model haircuts or boosts.
Change Detection	Compares the latest run with the prior saved model snapshot.	Highlights whether price, valuation, score, or forecast outputs moved materially since ...

Model Inputs, Process, and Outputs

The report follows a repeatable workflow: collect source and market inputs, process them into model tables, run valuation, factor, and risk modules, then summarize the results in PDF-ready outputs.

Stage	Inputs	Process	Outputs
1. Market Data, Risk Metrics, and Factor Exposure	CACI price history, S&P 500 benchmark data, Treasury yield proxy, defense ETF, technology ET...	Calculates returns, volatility, drawdown, beta, correlation, Sharpe ratio, Sortino ratio, tr...	Market Metrics, Market Snapshot, GARCH/VaR outputs, factor exposure summary, factor regressi...
2. Source and Guidance Audit	CACI investor presentation, earnings release, earnings slides, Form 10-K, government budget ...	Maps source material to model inputs and assigns confidence, relevance, and audit notes.	Source Catalog, Source Quality Review, Model Input Audit, Source Coverage Summary
3. Fundamental and Business Quality Review	Revenue guidance, FCF guidance, backlog, customer mix, technology mix, business quality assu...	Scores business quality, customer concentration, revenue visibility, cash flow conversion, a...	Fundamental Summary, Business Quality Summary, Valuation Driver Summary
4. Defense / Government / Macro Intelligence	Defense appropriations, intelligence budget toplines, CACI customer exposure, macro risk ass...	Builds weighted scorecards for defense risk, government spending support, intelligence expos...	Defense Risk Engine, Government Spending Model, Intelligence Spending Signal, Defense Macro ...
5. Valuation, Stress Testing, and Forecasting	Revenue growth, EBITDA margin, tax rate, capex, depreciation and amortization, working capit...	Runs bear/base/bull DCF scenarios, DCF sensitivity, defense contractor stress tests, revenue...	DCF Valuation Summary, DCF Sensitivity Table, Stress Test Summary, Stress Test Bridge, Stres...
6. Monte Carlo and Expected Return	Randomized DCF assumptions, current price, scenario probabilities, intelligence score, risk ...	Simulates fair value distribution and converts valuation output into raw and risk-adjusted e...	Monte Carlo Valuation Summary, Expected Return Summary, Expected Return Bridge
7. Peer and Final Signal	Peer company valuation, growth, margin, beta, and target-price data from yfinance	Benchmarks CACI against defense, government services, and technology-adjacent peers.	Peer Comparison, Peer Ranking, Peer Positioning Summary, final Defense Technology Intelligen...

Signal / Output Field Guide

Signals are qualitative labels generated from quantitative and source-driven model outputs. They are intended to make the report easier to scan while preserving the underlying numeric tables.

Signal Family	Meaning	Where It Appears
Positive / Strong / Constructive	The metric supports the valuation thesis, revenue visibility, business quality, factor ...	Business quality, defense technology score, government spending, news intelligence, fac...
Neutral / Monitor	The metric is not clearly positive or negative and should be monitored for future movem...	Defense risk, valuation, market metrics, factor model, change detection
Cautious / Mixed / Elevated Risk	The metric introduces risk, uncertainty, or downside sensitivity.	Customer concentration, appropriations timing, WACC risk, drawdown, Monte Carlo downsid...
Reference	The metric is informational and does not directly imply a positive or negative model co...	Fiscal years, share count, source counts, forecast horizon, regression observations, si...
Attractive Upside / High Upside Case	The valuation or simulation output shows meaningful upside relative to the current shar...	Monte Carlo summary, expected return summary, price forecast summary
Negative	The metric points to downside, weak sentiment, weak market performance, or unfavorable ...	Forecast downside cases, negative headlines, market risk outputs

Market Metrics

Metric	Value
Latest Price	$501.35
Latest S&P 500 Index Level	7,473.47
Total Return	98.77%
S&P 500 Total Return	129.40%
One-Year Return	5.60%

Risk-Free Rate	4.56%

GARCH / EWMA Volatility & VaR Summary

This section uses an actual GARCH model when the arch package is available and enabled. If GARCH fitting is unavailable or fails, the module falls back to EWMA volatility. The table summarizes model selection, realized volatility, historical VaR, parametric VaR, primary-model VaR, EWMA reference VaR, expected shortfall, and maximum observed daily loss.

Metric	Value	Signal	Interpretation
Volatility Model Used	GARCH(1,1)	Model Selection	GARCH(1,1) model fit successfully.
Latest Primary Annualized Volatility	28.00%	Moderate	Latest annualized volatility estimate from the selected primary volatility ...
Latest EWMA Annualized Volatility	30.79%	EWMA Reference	Latest EWMA annualized volatility estimate retained as a benchmark.
Rolling 21D Annualized Volatility	32.04%	Short-Term Volatility	Recent one-month realized volatility.
Rolling 63D Annualized Volatility	32.60%	Medium-Term Volatility	Recent three-month realized volatility.
Rolling 252D Annualized Volatility	32.76%	Long-Term Volatility	Recent one-year realized volatility.
Historical VaR 95	2.79%	One-Day Loss Estimate	Historical one-day loss threshold at the 95% confidence level.

Metric	Value	Signal	Interpretation
Historical VaR 99	4.78%	Tail Loss Estimate	Historical one-day loss threshold at the 99% confidence level.
Parametric VaR 95	3.05%	One-Day Loss Estimate	Normal-distribution one-day loss estimate at the 95% confidence level.
Parametric VaR 99	4.34%	Tail Loss Estimate	Normal-distribution one-day loss estimate at the 99% confidence level.
Primary VaR 95	2.90%	GARCH(1,1) VaR	Selected volatility-model one-day loss estimate at the 95% confidence level.
Primary VaR 99	4.10%	GARCH(1,1) Tail VaR	Selected volatility-model one-day loss estimate at the 99% confidence level.
EWMA VaR 95	3.19%	EWMA Reference VaR	EWMA volatility-based one-day loss estimate at the 95% confidence level.
EWMA VaR 99	4.51%	EWMA Reference Tail VaR	EWMA volatility-based one-day loss estimate at the 99% confidence level.
Expected Shortfall 95	4.37%	Tail Loss Average	Average historical loss beyond the 95% VaR threshold.
Expected Shortfall 99	7.67%	Extreme Tail Loss Average	Average historical loss beyond the 99% VaR threshold.
Maximum Daily Loss	13.86%	Historical Stress Point	Worst one-day loss observed in the study window.

Volatility Regime Summary

The volatility regime summary compares the latest primary annualized volatility estimate with its historical distribution. The primary model is GARCH when available and EWMA fallback otherwise.

Metric	Value	Signal	Interpretation
Volatility Model Used	GARCH(1,1)	Model Selection	Primary volatility model used for regime classification.
Latest Primary Volatility	28.00%	Elevated Volatility Regime	Latest annualized volatility estimate from the selected model.
Volatility Regime Percentile	63.36%	Elevated Volatility Regime	Current volatility is above typical historical levels.
Median Primary Volatility	25.66%	Historical Reference	Median annualized primary volatility across the study period.
90th Percentile Primary Volatility	36.90%	Stress Reference	Historical high-volatility reference threshold.
Maximum Primary Volatility	114.58%	Maximum Stress Reference	Highest annualized primary volatility observed in the study period.

VaR Backtest Summary

The VaR backtest compares realized daily losses with primary-model VaR thresholds and reports exception counts, exception rates, and Kupiec proportion-of-failures test outputs.

Metric	Value	Signal	Interpretation
VaR Model Used	GARCH(1,1)	Model Selection	Primary volatility model used for VaR backtesting.
Backtest Observations	1,605	Reference	Number of daily observations used for the VaR backtest.
Primary VaR 95 Exceptions	70	Pass	Number of days when realized loss exceeded the primary 95% VaR threshold.
Primary VaR 95 Exception Rate	4.36%	Pass	Observed exception rate versus expected 5% exception rate.
Primary VaR 95 Kupiec p-value	0.23	Pass	Kupiec POF test p-value; values above 0.05 generally indicate acceptable ca...
Primary VaR 99 Exceptions	26	Review	Number of days when realized loss exceeded the primary 99% VaR threshold.
Primary VaR 99 Exception Rate	1.62%	Review	Observed exception rate versus expected 1% exception rate.
Primary VaR 99 Kupiec p-value	0.02	Review	Kupiec POF test p-value; values above 0.05 generally indicate acceptable ca...

Defense Equity Factor Exposure Summary

The factor exposure model estimates how much of CACI's daily return variation is explained by market, defense, technology, interest-rate, and volatility/risk-sentiment factors.

Metric	Value	Signal	Interpretation
Annualized Alpha	5.96%	Positive Alpha	Annualized intercept from the multi-factor regression.
Factor Model R-Squared	31.76%	Moderate Explanation	Share of CACI daily return variation explained by the selected factors.
Adjusted R-Squared	31.55%	Moderate Explanation	R-squared adjusted for the number of factors in the model.
Annualized Residual Volatility	24.78%	Idiosyncratic Risk	Annualized volatility not explained by the selected factor model.
Regression Observations	1,605	Reference	Number of aligned daily observations used in the factor regression.

Defense Equity Factor Regression Results

This table reports estimated factor betas / sensitivities from the multi-factor return model.

Factor	Beta / Sensitivity	Signal	Interpretation
S&P 500	0.49	Moderate Market Sensitivity	CACI daily returns have an estimated sensitivity of 0.49 to the S&P 500 factor in ...
Aerospace & Defense Factor	0.44	Moderate Defense Exposure	CACI daily returns have an estimated sensitivity of 0.44 to the Aerospace & Defens...
Technology Factor	-0.17	Low Technology Link	CACI daily returns have an estimated sensitivity of -0.17 to the Technology Factor...
Interest Rate Factor	-0.01	Mild Rate Sensitivity	CACI daily returns have an estimated sensitivity of -0.01 to the Interest Rate Fac...
Volatility / Risk Sentiment Factor	-0.00	Mild Risk-Off Sensitivity	CACI daily returns have an estimated sensitivity of -0.00 to the Volatility / Risk...

Factor Correlation Summary

This table shows CACI's simple daily return correlation with each selected factor.

Factor	Correlation	Signal	Interpretation
S&P 500	0.49	Moderate Correlation	Correlation between CACI daily returns and S&P 500.
Aerospace & Defense Factor	0.55	Moderate Correlation	Correlation between CACI daily returns and Aerospace & Defense Factor.
Technology Factor	0.39	Moderate Correlation	Correlation between CACI daily returns and Technology Factor.
Interest Rate Factor	0.04	Low Correlation	Correlation between CACI daily returns and Interest Rate Factor.
Volatility / Risk Sentiment Factor	-0.38	Negative Correlation	Correlation between CACI daily returns and Volatility / Risk Sentiment Factor.

Factor Contribution Summary

This table estimates descriptive annualized factor contribution using average factor returns and estimated sensitivities. It is an attribution view, not a forward forecast. Rate and volatility factors are excluded from this contribution table because they are modeled as level-change factors rather than return-based factors.

Factor	Average Annualized Factor Return	Beta / Sensitivity	Estimated Annualized Contribution	Signal	Interpretation
S&P 500	15.16%	0.49	7.43%	Moderate Market Sensitivity	Estimated directional contribution equals factor sensitivity multiplied by th...

Factor	Average Annualized Factor Return	Beta / Sensitivity	Estimated Annualized Contribution	Signal	Interpretation
Aerospace & Defense Factor	15.16%	0.44	6.70%	Moderate Defense Exposure	Estimated directional contribution equals factor sensitivity multiplied by th...
Technology Factor	25.89%	-0.17	-4.50%	Low Technology Link	Estimated directional contribution equals factor sensitivity multiplied by th...

Fundamental Summary

Category	Metric	Value	Model Use	Signal
Revenue Base	FY2026 revenue guidance midpoint	$9.55B	Starting revenue base for DCF	Positive
Profitability	EBITDA margin assumption	12.30%	Base-case operating margin proxy informed by Q3 FY2026 margin and guidance	Constructive
Cash Flow	Free cash flow guidance	At least $725M	Cross-check for DCF free cash flow level	Positive
Capital Structure	Diluted shares	22.2M	Equity value per share conversion	Important
Customer Mix	Department of Defense revenue exposure	53.00%	Supports link to U.S. defense spending and budget cycle	High Relevance
Customer Mix	Intelligence Community revenue exposure	25.00%	Supports intelligence-contractor thesis and NIP/MIP spending relevance	High Relevance
Technology Mix	Technology revenue mix	56.50%	Supports defense technology premium versus lower-growth services contractors	Positive
Technology Mix	Technology revenue growth	11.20%	Supports higher-quality growth thesis	Positive
Backlog / Visibility	Backlog and contract award visibility	Strong	Supports forward revenue visibility and qualitative business quality score	Positive
Business Quality	Defense technology / national security exposure	High	Supports qualitative intelligence score	Positive

Business Quality Summary

Quality Driver	Score	Weight	Weighted Contribution	Signal	Rationale	Valuation Link
Mission-Critical Demand	85	20.00%	17	Strong	CACI serves national security, defense, intelligence, cyber, and federal te...	Supports revenue durability and terminal demand confidence
Defense Technology Positioning	86	20.00%	17.20	Strong	Technology revenue mix and cyber/intelligence exposure support a differenti...	Supports valuation premium versus lower-growth services contractors
Revenue Visibility	82	18.00%	14.76	Constructive	Backlog, long-duration awards, and contract award momentum support forward ...	Supports base-case revenue confidence
Customer Concentration	58	13.00%	7.54	Monitor	Heavy U.S. government exposure creates policy, budget, appropriations, and ...	Raises WACC and scenario sensitivity risk
Cash Flow Conversion	76	17.00%	12.92	Constructive	FY2026 free cash flow guidance supports DCF quality and shareholder-value f...	Supports fair value per share and expected return model
Acquisition Execution	62	12.00%	7.44	Neutral / Monitor	Acquisitions can expand technology capabilities but introduce integration a...	Impacts margin, free cash flow conversion, and leverage

Business Quality Score Summary

Primary Quality Risk	Customer concentration and acquisition execution	Monitor	Government concentration, budget timing, and integration risk remain the ma...

Valuation Driver Summary

Valuation Driver	Company Evidence	Model Connection	Primary Risk
Revenue Growth	FY2026 guidance, backlog, contract awards, defense and intelligence demand	Bear/base/bull revenue growth assumptions	Budget timing, recompete losses, procurement delays
EBITDA Margin	Base-case margin assumption and technology mix	DCF EBITDA margin and FCF generation	Labor costs, contract mix, integration costs, execution risk
Free Cash Flow	FY2026 FCF guidance of at least $725M	DCF free cash flow cross-check and expected return confidence	Working capital timing, capex, acquisition integration
Discount Rate / WACC	Government customer concentration and interest rate environment	DCF present value and terminal value sensitivity	Higher Treasury yields, credit spreads, valuation multiple compression
Terminal Growth	Long-duration national security, cyber, intelligence, and modernization demand	Terminal value and sensitivity table	Policy shifts, lower federal spending growth, competitive pressure
Defense Technology Premium	Technology revenue mix, cyber/intelligence exposure, mission-critical programs	Qualitative score, peer valuation interpretation, expected-return confidence	If growth/margins resemble lower-growth government services peers

Source Quality Review

The source quality table ranks the reliability and valuation relevance of the main sources used across the CACI model.

Signal	Interpretation	Source	Reliability Score	Source Quality	Reason	Best Used For
Very High Confidence	CACI FY2025 Form 10-K carries a very high reliability rating and is best used for:...	CACI FY2025 Form 10-K	95	Very High	SEC-filed annual report with audited historical financial disclosures and risk fac...	Historical financials, backlog definitions, customer mix, risk factors
High Confidence	CACI Q3 FY2026 Earnings Release carries a high reliability rating and is best used...	CACI Q3 FY2026 Earnings Release	88	High	Company-reported quarterly results and guidance update.	FY2026 guidance, quarterly revenue, cash flow, awards, customer mix
High Confidence	CACI Q3 FY2026 Earnings Slides carries a high reliability rating and is best used ...	CACI Q3 FY2026 Earnings Slides	84	High	Company presentation that explains quarterly results and strategic positioning.	Q3 operating context, technology mix, contract award discussion
High Confidence	CACI Investor Presentation January 2026 carries a high reliability rating and is b...	CACI Investor Presentation January 2026	82	High	Management presentation useful for guidance, strategy, and medium-term framework.	Three-year targets, backlog, book-to-bill, capital allocation
High Confidence	ODNI IC Budget carries a high reliability rating and is best used for: NIP and MIP...	ODNI IC Budget	86	High	Official public intelligence budget topline source.	NIP and MIP public budget context
High Confidence	Senate FY2026 Defense Appropriations carries a high reliability rating and is best...	Senate FY2026 Defense Appropriations	84	High	Official congressional appropriations communication.	Defense spending backdrop and government funding context

Signal	Interpretation	Source	Reliability Score	Source Quality	Reason	Best Used For
Medium / High Confidence	SIPRI Military Expenditure Database carries a medium / high reliability rating and...	SIPRI Military Expenditure Database	78	Medium / High	Widely used defense spending database, but less directly tied to CACI revenue.	Global military spending context
Medium Confidence	Yahoo Finance Analyst Analysis carries a medium reliability rating and is best use...	Yahoo Finance Analyst Analysis	60	Medium	Useful market data feed, but estimates can be delayed, incomplete, or unavailable ...	Runtime analyst estimate tables and market reference data

Source Coverage Summary

The source coverage summary evaluates source depth, URL coverage, and average reliability across model inputs.

Metric	Value	Signal	Interpretation
Total Sources	8	Reference	Number of source categories used in the valuation and intelligence pipeline.
High Priority Sources	6	Source Depth	Number of sources marked as high or very high priority.
High Valuation-Relevance Sources	6	Valuation Coverage	Number of sources directly relevant to valuation assumptions.
URL Coverage	100.00%	Complete	Share of source catalog entries with configured URLs.
Average Source Confidence Score	83.12	High Confidence	Average confidence score across cataloged sources.
Average Reliability Score	82.12	High Confidence	Average reliability score across quality-rated sources.

Model Input Audit

The model input audit links key valuation and intelligence assumptions to their primary sources.

Signal	Interpretation	Model Input	Current Value	Primary Source	Audit Note	Used In
Very High Confidence	Base FY2026 revenue has very high confidence based on CACI Q3 FY2026 Earnings Rele...	Base FY2026 revenue	$9.55B	CACI Q3 FY2026 Earnings Release	Uses midpoint of FY2026 revenue guidance range.	DCF, forecast model, expected return model
Medium / High Confidence	Base EBITDA margin has medium / high confidence based on CACI Q3 FY2026 Earnings R...	Base EBITDA margin	12.3%	CACI Q3 FY2026 Earnings Release / model assumption	Margin assumption should be reviewed after each earnings release.	DCF valuation
High Confidence	Base free cash flow has high confidence based on CACI Q3 FY2026 Earnings Release.	Base free cash flow	$725M	CACI Q3 FY2026 Earnings Release	Uses minimum FY2026 FCF guidance.	DCF cross-check, expected return model
High Confidence	Diluted shares has high confidence based on CACI Q3 FY2026 Earnings Release.	Diluted shares	22.2M	CACI Q3 FY2026 Earnings Release	Should be updated if buybacks, issuance, or guidance changes materially.	DCF per-share conversion
High Confidence	Backlog has high confidence based on CACI Investor Presentation and FY2025 Form 10-K.	Backlog	$33B investor presentation / $31.4B FY2025 10-K	CACI Investor Presentation and FY2025 Form 10-K	Investor presentation reflects later context; 10-K provides SEC-filed historical b...	Defense risk engine, business quality score, report narrative
High Confidence	Customer mix has high confidence based on CACI Q3 FY2026 Earnings Release.	Customer mix	DoD 53.0%, IC 25.0%, federal civilian 17.8%, commercial/other 4.2%	CACI Q3 FY2026 Earnings Release	Quarterly mix may differ from full-year SEC-reported mix.	Government spending model, defense macro model, risk engine
High Confidence	Public intelligence budget has high confidence based on ODNI IC Budget.	Public intelligence budget	NIP / MIP public toplines	ODNI IC Budget	Public toplines do not reveal classified program-level allocations.	Intelligence spending model
Medium / High Confidence	Defense appropriations has medium / high confidence based on Senate FY2026 Defense...	Defense appropriations	FY2026 defense appropriations reference	Senate FY2026 Defense Appropriations	Appropriations provide broad funding context but do not directly map to CACI revenue.	Government spending model, defense macro model

Input Confidence Summary

This table summarizes confidence levels across core model inputs.

Metric	Value	Signal	Interpretation
Average Input Confidence Score	83.75	High Confidence	Average confidence score across key model inputs.
Lowest Input Confidence Score	78	Medium / High Confidence	Lowest confidence score among key model inputs.
Highest Input Confidence Score	90	Very High Confidence	Highest confidence score among key model inputs.

Missing Source URL Review

This table flags whether any source catalog entries are missing configured URLs.

Signal	Interpretation	Source	Valuation Relevance	Type	Priority

Backlog and Pipeline Indicators

Backlog, book-to-bill, award duration, and submitted bids are used as qualitative support for forward revenue visibility.

Metric	Value	Interpretation	Valuation Link	Source	Signal
TTM contract awards	$11.6B	Strong demand and contract conversion backdrop	Supports revenue visibility and medium-term growth assumptions	January 2026 investor presentation	Positive
TTM book-to-bill	1.3x	Awards above revenue support forward visibility	Supports premium business-quality score	January 2026 investor presentation	Positive
Weighted average award duration	>6 years	Supports long-duration revenue visibility	Supports lower revenue volatility assumption	January 2026 investor presentation	Positive
Backlog	$33B	Approximately 3.7 years of annualized revenue	Supports base-case and bull-case revenue durability	January 2026 investor presentation	Positive
Submitted bids	$6B, >70% for new business	Potential new-business pipeline	Supports future growth optionality	January 2026 investor presentation	Constructive
Expected bids next two quarters	$20B, >70% for new business	Large near-term bid pipeline	Supports contract-award momentum score	January 2026 investor presentation	Constructive
FY2025 10-K backlog	$31.4B total backlog; $4.2B funded backlog	SEC-filed baseline for backlog bridge	Provides audited reference point for backlog analysis	FY2025 Form 10-K	High Confidence Reference

Revenue Mix and Business Exposure

Category	Metric	Value	Interpretation	Source	Signal
Q3 FY2026 Customer Mix	Department of Defense	53.0% of Q3 revenue	Major defense exposure	Q3 FY2026 earnings release	High Government Exposure
Q3 FY2026 Customer Mix	Intelligence Community	25.0% of Q3 revenue	High national-security exposure	Q3 FY2026 earnings release	High Intelligence Exposure
Q3 FY2026 Customer Mix	Federal civilian agencies	17.8% of Q3 revenue	Federal modernization exposure	Q3 FY2026 earnings release	Federal Modernization Exposure
Q3 FY2026 Customer Mix	Commercial and other	4.2% of Q3 revenue	Limited non-government exposure	Q3 FY2026 earnings release	Low Commercial Diversification
Q3 FY2026 Expertise / Technology	Technology	56.5% of Q3 revenue; +11.2% YoY	Technology segment is majority of revenue and growing faster	Q3 FY2026 earnings release	Positive Technology Mix
Q3 FY2026 Expertise / Technology	Expertise	43.5% of Q3 revenue; +5.2% YoY	Expertise remains important but grows slower than technology	Q3 FY2026 earnings release	Stable Services Base
FY2025 10-K Customer Mix	DoD	75.4% of FY2025 revenue	Audited annual baseline shows heavy defense customer concentration	FY2025 Form 10-K	High Customer Concentration
FY2025 10-K Customer Mix	Federal civilian agencies	20.3% of FY2025 revenue	Secondary federal customer channel	FY2025 Form 10-K	Federal Civilian Exposure
FY2025 10-K Customer Mix	Commercial and other	4.3% of FY2025 revenue	Small commercial and other exposure	FY2025 Form 10-K	Low Commercial Diversification

Capital Allocation Summary

Theme	Signal	Evidence	Valuation Relevance	Interpretation
Free Cash Flow	Positive	FY2026 free cash flow guidance of at least $725M and 3-year cumulative FCF ...	Supports DCF quality and shareholder-return capacity	Free cash flow guidance provides a high-value cross-check against DCF output.
Acquisitions	Important	Recent acquisition activity, including ARKA, supports technology portfolio ...	Can accelerate growth but increases integration and capital allocation risk	Acquisitions support technology positioning but require integration monitor...
Share Count	Positive	Diluted weighted average shares guidance of 22.2M	Lower share count supports per-share valuation if FCF growth is sustained	Share count is a direct driver of fair value per share.
Capex Discipline	Positive	FY2026 capex framework around ~$85M	Low capital intensity supports FCF conversion	Capex discipline supports free cash flow conversion and valuation quality.

Key Risk Factors

Risk	Potential Impact	Model Sensitivity	Signal	Interpretation
Federal budget and appropriations timing	Delayed awards, revenue timing pressure, or reduced program funding	Revenue growth, backlog conversion, working capital	Monitor	Budget timing can affect near-term award flow and working-capital cadence.
Contract recompete pressure	Lost recompetes or lower-margin renewals could pressure growth and margins	Revenue growth, EBITDA margin	Monitor	Recompete losses could reduce revenue visibility and margin durability.
Customer concentration	Heavy exposure to U.S. government customers increases policy and budget risk	WACC, terminal growth, revenue durability	Elevated Structural Risk	Government concentration supports visibility but raises policy and funding sensiti...
Acquisition integration	Integration issues could reduce expected synergies or increase costs	EBITDA margin, FCF conversion	Monitor	Integration execution matters for margin realization and portfolio expansion.
Valuation multiple compression	Higher rates or weaker defense technology sentiment could reduce market multiples	WACC, terminal value, peer comparison	Market Risk	Multiple compression would pressure equity value even if fundamentals remain intact.
Labor and cleared talent constraints	Difficulty hiring specialized cleared employees could limit program execution	Revenue growth, margin execution	Execution Risk	Cleared talent availability is a key execution variable for defense technology pro...

Defense Risk Engine Summary

The defense risk engine scores CACI-specific risks including federal budget risk, contract recompete risk, backlog visibility, customer concentration, acquisition integration, labor constraints, margin execution, and interest-rate sensitivity.

DCF Valuation Summary

The DCF valuation uses revenue growth, EBITDA margin, tax rate, depreciation and amortization, capex, working capital, WACC, and terminal growth assumptions to estimate enterprise value, equity value, and fair value per share.

Signal	Interpretation	Scenario	Fair Value Per Share	Revenue CAGR	EBITDA Margin	WACC	Terminal Growth	Enterprise Value	Equity Value
Downside Case	Bear case fair value reflects a 4.1% revenue CAGR, 11.2% EBITDA mar...	Bear	$384.52	4.10%	11.20%	9.50%	2.00%	$11.44B	$8.54B
Neutral / Monitor	Base case fair value reflects a 5.6% revenue CAGR, 12.2% EBITDA mar...	Base	$609.30	5.59%	12.20%	8.50%	2.50%	$16.43B	$13.53B
Upside Case	Bull case fair value reflects a 7.1% revenue CAGR, 13.2% EBITDA mar...	Bull	$924.38	7.09%	13.20%	7.80%	3.00%	$23.42B	$20.52B

DCF Assumptions Audit

This table summarizes scenario-level and model-wide DCF assumptions.

Scenario	Assumption	Value	Signal	Interpretation
Bear	Revenue CAGR	4.10%	Stable / Supportive	Implied compound annual revenue growth across explicit forecast years.
Bear	EBITDA Margin	11.20%	Stable	Scenario EBITDA margin used to convert revenue into operating cash flow proxy.
Bear	WACC	9.50%	Elevated Discount Rate	Scenario weighted average cost of capital used to discount free cash flow.
Bear	Terminal Growth	2.00%	Normal Range	Long-term growth assumption used in terminal value calculation.
Base	Revenue CAGR	5.59%	Stable / Supportive	Implied compound annual revenue growth across explicit forecast years.
Base	EBITDA Margin	12.20%	Constructive	Scenario EBITDA margin used to convert revenue into operating cash flow proxy.
Base	WACC	8.50%	Normal Range	Scenario weighted average cost of capital used to discount free cash flow.
Base	Terminal Growth	2.50%	Normal Range	Long-term growth assumption used in terminal value calculation.
Bull	Revenue CAGR	7.09%	Constructive	Implied compound annual revenue growth across explicit forecast years.
Bull	EBITDA Margin	13.20%	Strong Margin	Scenario EBITDA margin used to convert revenue into operating cash flow proxy.
Bull	WACC	7.80%	Normal Range	Scenario weighted average cost of capital used to discount free cash flow.
Bull	Terminal Growth	3.00%	High Terminal Growth	Long-term growth assumption used in terminal value calculation.
Model-Wide	Base Revenue	$9.55B	Reference	Starting revenue base for the explicit DCF forecast.
Model-Wide	Net Debt	$2.90B	Reference	Net debt deducted from enterprise value to estimate equity value.
Model-Wide	Diluted Shares	22.20	Reference	Diluted share count used to convert equity value into fair value per share.
Model-Wide	Tax Rate	24.00%	Reference	Tax rate applied to EBIT to estimate NOPAT.
Model-Wide	Capex % Revenue	1.00%	Reference	Capital expenditure assumption as a percentage of revenue.
Model-Wide	D&A % Revenue	2.35%	Reference	Depreciation and amortization assumption as a percentage of revenue.

Base Case Valuation Bridge

This bridge connects explicit free cash flow, terminal value, enterprise value, net debt, equity value, and fair value per share.

Bridge Item	Value	Signal	Interpretation
PV of Explicit FCF	$3.92B	Positive FCF	Present value of the five-year explicit free cash flow forecast.
PV of Terminal Value	$12.50B	Moderate Terminal Dependency	Present value of terminal value after the explicit forecast period.
Enterprise Value	$16.43B	Valuation Output	Enterprise value implied by explicit free cash flow plus terminal value.
Net Debt	$2.90B	Deduction	Net debt deducted from enterprise value.
Equity Value	$13.53B	Valuation Output	Equity value after deducting net debt.
Diluted Shares	22.20	Share Count	Diluted shares used for fair value per share conversion.
Base Fair Value Per Share	$609.30	Neutral / Monitor	Base-case DCF fair value per share.
Implied EV/EBITDA	10.74	Valuation Multiple	Enterprise value divided by year-five EBITDA.
Implied FCF Yield	8.14%	Cash Flow Yield	Year-five free cash flow divided by equity value.

DCF Sensitivity Table

This table shows base-case fair value per share sensitivity across WACC and terminal growth assumptions.

Terminal Growth	Signal	WACC 7.5%	WACC 8.0%	WACC 8.5%	WACC 9.0%	WACC 9.5%
1.50%	Conservative	$635.13	$575.36	$524.14	$479.76	$440.95
2.00%	Normal Range	$691.37	$622.07	$563.45	$513.21	$469.68

Defense Contractor Stress Test Score

The stress-test score summarizes CACI's valuation resilience across downside scenarios. The score is derived from average downside versus the base-case DCF fair value.

Metric	Value	Signal	Interpretation
Stress Resilience Score	39.95	Low Stress Resilience	Score derived from average downside across non-base stress cases.
Average Stress Downside	-24.02%	Reference	Average downside versus base case across all non-base stress scenarios.
Worst Stress Downside	-44.98%	Reference	Largest downside versus base case across the stress scenarios.
Worst Stress Case	Combined Downside Case	Severe Stress	Models a combined stress case with slower growth, lower margin, higher WACC...

Defense Contractor Stress Test Summary

The stress-test module evaluates downside valuation sensitivity across federal budget delay, continuing resolution / award timing delay, higher WACC / rate shock, margin compression, contract recompete loss, revenue growth slowdown, and a combined downside case.

Interpretation	Stress Case	Stress Signal	Valuation Bias	Downside vs Base Case	Fair Value Per Share	Revenue CAGR	EBITDA Margin	WACC

Stress Test Assumptions

This table documents the revenue growth, EBITDA margin, WACC, and terminal growth adjustments used in each stress scenario.

Stress Case	Revenue Growth Adjustment	EBITDA Margin Adjustment	WACC Adjustment	Terminal Growth Adjustment	Description	Base Revenue CAGR	Base EBITDA Margin
Base Case	0.00%	0.00%	0.00%	0.00%	Current base-case DCF assumptions.	5.59%	12.20%
Federal Budget Delay	-1.00%	-0.30%	0.25%	-0.10%	Moderate award timing delay and slower backlog conversion.	5.59%	12.20%

Stress Case	Revenue Growth Adjustment	EBITDA Margin Adjustment	WACC Adjustment	Terminal Growth Adjustment	Description	Base Revenue CAGR	Base EBITDA Margin
Continuing Resolution / Award Timing Delay	-1.75%	-0.50%	0.50%	-0.15%	Sharper federal procurement delay and contract-start timing pressure.	5.59%	12.20%
Higher WACC / Rate Shock	-0.25%	-0.10%	1.00%	-0.25%	Higher discount-rate environment and valuation multiple pressure.	5.59%	12.20%
Margin Compression	-0.25%	-1.00%	0.25%	-0.10%	Lower profitability from labor pressure, mix, or integration costs.	5.59%	12.20%
Contract Recompete Loss	-2.00%	-0.75%	0.40%	-0.20%	Lost recompetes or lower-margin renewals pressure revenue and margins.	5.59%	12.20%
Revenue Growth Slowdown	-2.50%	-0.25%	0.25%	-0.15%	Broad growth slowdown from lower award conversion or program delays.	5.59%	12.20%
Combined Downside Case	-3.00%	-1.25%	1.25%	-0.35%	Combined lower growth, lower margin, higher WACC, and lower terminal growth.	5.59%	12.20%

Forecast Summary

The forecasting section links the DCF scenario framework to revenue, fair value, and simulated price outcomes.

Signal	Interpretation	Scenario	Fair Value Per Share	Revenue CAGR	Year 5 Revenue	Year 5 EBITDA	Year 5 FCF	Implied EV/EBITDA
Scenario Output	DCF-derived scenario forecast output.	Bear	$384.52	4.10%	$11.67B	$1.31B	$938M	8.75
Scenario Output	DCF-derived scenario forecast output.	Base	$609.30	5.59%	$12.54B	$1.53B	$1.10B	10.74
Scenario Output	DCF-derived scenario forecast output.	Bull	$924.38	7.09%	$13.45B	$1.78B	$1.28B	13.19

Revenue Forecast Detail

Interpretation	Scenario	EBITDA Margin	Forecast Year	Revenue Growth	Forecast Revenue
Year 1 revenue forecast for the Bear scenario.	Bear	11.20%	1	5.50%	$10.08B
Year 2 revenue forecast for the Bear scenario.	Bear	11.20%	2	4.50%	$10.53B
Year 3 revenue forecast for the Bear scenario.	Bear	11.20%	3	4.00%	$10.95B
Year 4 revenue forecast for the Bear scenario.	Bear	11.20%	4	3.50%	$11.33B
Year 5 revenue forecast for the Bear scenario.	Bear	11.20%	5	3.00%	$11.67B
Year 1 revenue forecast for the Base scenario.	Base	12.20%	1	7.50%	$10.27B
Year 2 revenue forecast for the Base scenario.	Base	12.20%	2	6.50%	$10.93B
Year 3 revenue forecast for the Base scenario.	Base	12.20%	3	5.50%	$11.53B
Year 4 revenue forecast for the Base scenario.	Base	12.20%	4	4.50%	$12.05B
Year 5 revenue forecast for the Base scenario.	Base	12.20%	5	4.00%	$12.54B
Year 1 revenue forecast for the Bull scenario.	Bull	13.20%	1	9.50%	$10.46B
Year 2 revenue forecast for the Bull scenario.	Bull	13.20%	2	8.00%	$11.29B

Interpretation	Scenario	EBITDA Margin	Forecast Year	Revenue Growth	Forecast Revenue
Year 3 revenue forecast for the Bull scenario.	Bull	13.20%	3	7.00%	$12.08B
Year 4 revenue forecast for the Bull scenario.	Bull	13.20%	4	6.00%	$12.81B
Year 5 revenue forecast for the Bull scenario.	Bull	13.20%	5	5.00%	$13.45B

Price Forecast Summary

Metric	Value	Signal	Interpretation
Latest Price	$501.35	Reference	Latest market price used as the forecast starting point.
Mean Forecast Price	$589.85	Constructive	Average final simulated price across all forecast paths.
Median Forecast Price	$563.50	Constructive	Median final simulated price across all forecast paths.
P10 Forecast Price	$385.73	Negative	Tenth-percentile downside forecast price.
P25 Forecast Price	$460.65	Cautious	Twenty-fifth-percentile forecast price.
P75 Forecast Price	$691.52	Strong Upside	Seventy-fifth-percentile forecast price.
P90 Forecast Price	$830.15	Strong Upside	Ninetieth-percentile upside forecast price.
Mean Forecast Return	17.65%	Constructive	Average simulated return over the forecast horizon.
Median Forecast Return	12.40%	Constructive	Median simulated return over the forecast horizon.
P10 Forecast Return	-23.06%	Negative	Tenth-percentile downside forecast return.
P90 Forecast Return	65.58%	Strong Upside	Ninetieth-percentile upside forecast return.
Forecast Horizon Days	252	Reference	Number of trading days simulated in each price forecast path.
Forecast Simulations	5,000	Reference	Number of bootstrapped simulation paths used in the forecast.

Yahoo Finance Analyst Estimate Tables

The model attempts to collect Yahoo Finance analysis-style tables through yfinance, including earnings estimates, revenue estimates, EPS trends, EPS revisions, growth estimates, and analyst price targets when available.

Source Table	Available	Rows	Columns	Summary
Earnings Estimate	Yes	4	9	4 row(s), 9 column(s) collected
Revenue Estimate	Yes	4	9	4 row(s), 9 column(s) collected
Earnings History	Yes	4	6	4 row(s), 6 column(s) collected
EPS Trend	Yes	4	8	4 row(s), 8 column(s) collected
EPS Revisions	Yes	4	7	4 row(s), 7 column(s) collected
Growth Estimates	Yes	5	4	5 row(s), 4 column(s) collected
Analyst Price Targets	Yes	1	6	1 row(s), 6 column(s) collected

Analyst Source Quality

This table evaluates the reliability of live and manual analyst inputs used in the project.

Metric	Value	Signal	Score	Interpretation
Yahoo Estimate Table Availability	100.00%	Strong live estimate coverage	85	Measures how many yfinance estimate tables were available during this run.
Available Tables	7	Strong live estimate coverage	85	Number of Yahoo/yfinance tables that returned usable data.
Total Tables Requested	7	Strong live estimate coverage	85	Number of analyst estimate tables requested by the model.

Manual Analyst / Guidance Inputs

This fallback table preserves important forward-looking assumptions when live Yahoo Finance estimate tables are unavailable or incomplete.

Metric	Value	Model Use	Source	Confidence
FY2026 revenue guidance midpoint	$9.55B	DCF starting revenue base	CACI Q3 FY2026 guidance	High
FY2026 free cash flow guidance	$725M	DCF free cash flow reasonableness check	CACI Q3 FY2026 guidance	High
Mid-term revenue growth framework	High-single-digit CAGR	DCF revenue growth scenario support	CACI January 2026 investor presentation	Medium / High
Mid-term free cash flow framework	Greater than 15% CAGR	Bull-case FCF expansion support	CACI January 2026 investor presentation	Medium / High
Analyst estimate availability	Variable through yfinance	Optional revenue growth hint	Yahoo Finance / yfinance	Medium

Monte Carlo Valuation Summary

The Monte Carlo model simulates fair value per share using randomized growth, margin, WACC, and terminal growth assumptions.

Metric	Value	Signal	Interpretation
Mean Fair Value	$644.62	Constructive	Average simulated fair value per share.
Median Fair Value	$624.53	Neutral / Monitor	Median simulated fair value per share.

Metric	Value	Signal	Interpretation
Fair Value Standard Deviation	$135.79	Volatility Measure	Dispersion of simulated fair value outcomes.
P5 Downside Case	$456.68	Cautious	Fifth-percentile downside fair value case.
P10 Downside Case	$488.76	Cautious	Tenth-percentile downside fair value case.
P25 Lower Quartile	$549.14	Neutral / Monitor	Twenty-fifth percentile fair value outcome.
P75 Upper Quartile	$720.52	Constructive	Seventy-fifth percentile fair value outcome.
P90 Upside Case	$825.55	High Upside Case	Ninetieth-percentile upside fair value case.
P95 High Upside Case	$898.43	High Upside Case	Ninety-fifth-percentile high upside fair value case.
Minimum Simulated Value	$330.16	Downside Case	Lowest simulated fair value outcome.
Maximum Simulated Value	$1,371.83	High Upside Case	Highest simulated fair value outcome.
Probability Above Current Price	87.24%	Attractive Upside	Share of simulations where fair value exceeds current market price.
Median Monte Carlo Expected Return	24.57%	Constructive	Median simulated fair value versus current market price.
Mean Revenue CAGR	5.99%	Stable / Supportive	Average simulated five-year revenue CAGR assumption.
Mean EBITDA Margin	12.32%	Constructive	Average simulated EBITDA margin assumption.
Mean WACC	8.49%	Normal Range	Average simulated weighted average cost of capital.
Mean Terminal Growth	2.50%	Normal Range	Average simulated terminal growth assumption.
Mean Implied EV/EBITDA	10.93	Valuation Multiple	Average simulated implied EV/EBITDA multiple.

Expected Return Summary

The expected return model compares current market price to DCF scenario values, Monte Carlo output, intelligence score, stress resilience adjustment, defense risk adjustments, and news intelligence adjustments.

Metric	Value	Signal	Interpretation
Current Share Price	$501.35	Reference	Latest market price from Yahoo Finance.
Bear Case Fair Value	$384.52	Negative	DCF downside scenario with 25% probability weight.
Base Case Fair Value	$609.30	Positive	DCF base scenario with 50% probability weight.
Bull Case Fair Value	$924.38	Positive	DCF upside scenario with 25% probability weight.
Bear Scenario Probability	25.00%	Reference	Probability weight assigned to the bear-case DCF scenario.
Base Scenario Probability	50.00%	Reference	Probability weight assigned to the base-case DCF scenario.
Bull Scenario Probability	25.00%	Reference	Probability weight assigned to the bull-case DCF scenario.
Probability-Weighted Fair Value	$631.88	Positive	Bear, base, and bull fair values weighted by the scenario probabilities above.
Monte Carlo Median Fair Value	$624.53	Positive	Median simulated fair value from Monte Carlo model.
Raw Expected Return	26.04%	Attractive Upside	Probability-weighted fair value versus current share price.
Monte Carlo Expected Return	24.57%	Constructive	Monte Carlo median fair value versus current share price.
Intelligence Score	66.90	Moderate / High	Defense Technology Intelligence Score used to determine the valuation haircut.
Intelligence Score Haircut	-5.00%	Risk Adjustment	Risk haircut based on the Defense Technology Intelligence Score.

8. Risk-Adjusted Expected Return	17.54%	Constructive	Final risk-adjusted expected return signal.

Change Detection Summary

The change detection module compares this run against the prior saved snapshot to highlight model movement.

Metric	Value	Interpretation
Major Changes	0	Number of metrics with major movement versus the prior run
Moderate Changes	0	Number of metrics with moderate movement versus the prior run
Minor Changes	2	Number of metrics with minor movement versus the prior run
Changed Text Metrics	1	Number of non-numeric metrics that changed versus the prior run
Stable Metrics	34	Number of metrics with limited or no movement
Primary Change Driver	No major or moderate changes	The latest run is broadly consistent with the prior run.

Defense Technology Intelligence Score

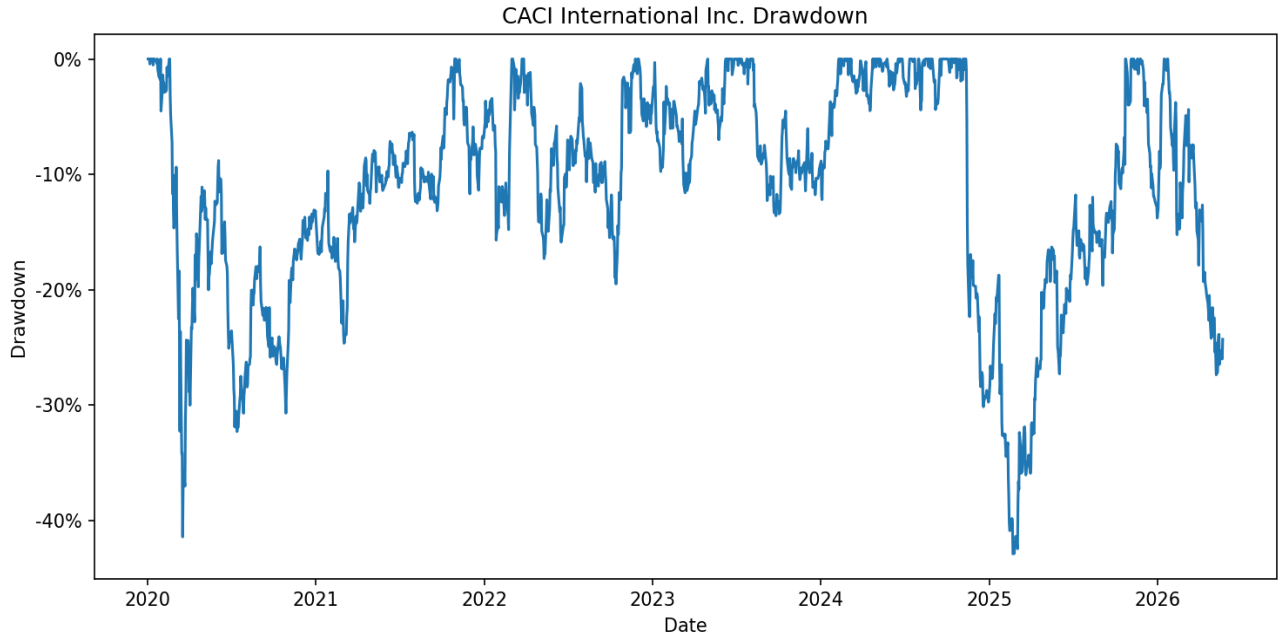

The intelligence score combines market risk, valuation support, business quality, defense technology exposure, and stress-test resilience. Stress testing now directly affects the final score through the Stress Resilience component.

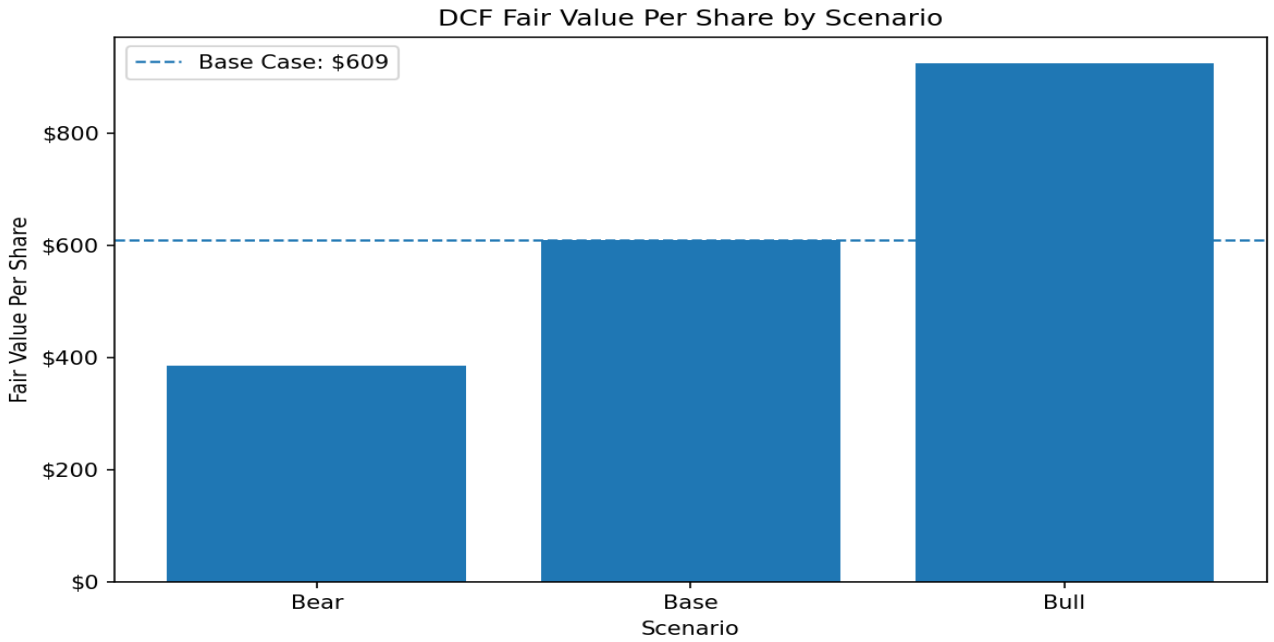

Component	Score	Weight	Weighted Contribution	Signal	Driver Value	Interpretation
Market Momentum / Sharpe	48.51	12.00%	5.82	Weak	0.23	Scores market risk-adjusted performance using Sharpe ratio.
Beta Stability	71.04	10.00%	7.10	Neutral / Monitor	0.71	Scores volatility sensitivity relative to S&P 500 beta.
Drawdown Resilience	57.12	8.00%	4.57	Cautious / Monitor	-42.88%	Scores downside resilience using maximum drawdown.
DCF Valuation Support	72	23.00%	16.56	Neutral / Monitor	21.53%	Scores base-case DCF upside/downside relative to current market price.
Business Quality	82	17.00%	13.94	Constructive	82	Reflects mission-critical demand, revenue visibility, cash flow quality, an...
Defense Technology Exposure	86	15.00%	12.90	Strong	86	Reflects CACI's cyber, intelligence, mission technology, modernization, and...
Stress Resilience	39.95	15.00%	5.99	Weak	39.95	Scores valuation resilience across downside stress scenarios. Average stres...
One-Year Return Reference		0.00%		Reference	5.60%	Reference market performance metric; not directly weighted in the score.
